

ABSTRACT

An increasingly impactful part of everyday life is how we interact with our technological Devices, most notably our computers. Much of the ingenuity stemming from human-computerinteraction research focuses only on improving current mainstream devices out there today. Only a few modes of Human-Computer interaction exist today: namely through keyboards, mouses, touch screens, and other handheld helper devices. Each of these devices has been confronted with their own limitations when adapting to more powerful and versatile hardware in computers.

A commonality between the issues of these devices are this: providing an intuitive mode of human-computer interaction cheaply without the additive of extra devices. With that said, we felt there were ways we could build an intuitive gesture-control mode of human-controlinteraction without the need to necessarily build another device. When tackling this problem of creating a new mode of human-computer interaction we knew we could utilize a combination of built-in functions that is typically provided in most computer designs. Specifically we have exploited the built-in webcam that has become a standard feature in most computers. This feature provides us a way to track and respond user hand-free movements and gestures.

Using a combination object detection and recognition, the following project successfully builds a computationally inexpensive static hand gesture recognition system using a simple RGB webcam - creating a truly more natural form of human-computer interaction.

Acknowledgement	I
Abstract	II
Table of Contents with page number of chapters and sub topics	III
List of figures	IV
1.INTRODUCTION	1
2. LITERATURE SURVEY	
2.1 Hand Gesture Recognition using Web Cam	9
2.2 Hand Gesture Recognition Using Deep Learning	13
2.3 A Basic Hand Gesture Control System for PC Applications	16
2.4 Recognition of Static Hand Gesture	20
2.5 A static hand gesture recognition system for real time mobile device monitoring	24
3. PROBLEM STATEMENT	28
4. SYSTEM REQUIREMENTS	
4.1 Functional Requirements	30
4.2 Non-Functional Requirements	32
4.3 Hardware Requirements	33
4.4 Software Requirements	33
5. ARCHITECTURE	
5.1 System Architecture	35
6. SYSTEM DESIGN	
6.1 Flow Chart	44
6.2 Use Case Diagram	47
6.3 Activity Diagram	48
6.4 Interface Design	49
6.5 Modules	50
7. IMPLEMENTATION	53
8. RESULTS AND TESTING	
8.1 Unit Testing	70
8.2 Snapshots	71
9. CONCLUSION	78
9.1 Future Work	79
10. BIBLIOGRAPHY	81

LIST OF FIGURES

1.1 Different types of hand gestures	2
2.1 Literature survey paper 1: Block diagram of recognition model	10
2.2 Literature survey paper 2: Flow diagram	14
2.3 Literature survey paper 3: Methodology used	17
2.4 Literature survey paper 4: System architecture	20
2.5 Literature survey paper 5: System flow chart	22
5.1 System Architecture	35
5.2 Image pre processing steps	36
5.3 Thresholding effect on input image	37
5.4 Effect of background subtraction	38
5.5 Thinning effect on input image	39
5.6 Haar cascade classifier	41
6.1 ApplicationFlowChart	44
6.2 Use case diagram	47
6.3 Activity Diagram	48
6.4 Interface design	49
6.5 Functioning of OpenCV	50
8.1 Result 1: Previous slide on three finger gesture	70
8.2 Result 2:Start slide show on five finger gesture	71
8.3 Result 3:End slide show on two finger gesture	71
8.4 Result 4:Next slide on four finger gesture	72
8.5 Result 5:Start video with palm gesture	72
8.6 Result 6:Stop video with palm gesture	73
8.7 Result 7:Volume up with palm gesture	74
8.8 Result 8:Video rewind with point gesture	74
8.9 Result 9:Forward with OK gesture	75
8.10 Result 10:Start game with closed palm	75
8.11 Result 11: Jump T-rex with open palm	76
